Curriculum Development

PSYC 461/561 (Learning and Memory): The goal of this course is for students to understand theories about how human beings learn (encode), store, and retrieve (remember) all of the amazing things that we are able to remember. To do this (and to gain historical perspective), we will discuss the research experiments which led to these theories as well as current conceptualizations of memory. To wit, it is important that students are able to read and understand psychological research articles.
