

Master of Science in Engineering Automotive Systems Engineering

Program Goals

1. Ability to apply engineering knowledge and skills to engineering problems
2. Ability to design, analyze, and model automotive, manufacturing, and energy system or process
3. Ability to communicate effectively in professional reporting and presentations.

Learning Outcomes

1. Students will be able to apply knowledge and skills to engineering problems
2. Students will be able to design, analyze, and model automotive systems or process
3. Students will be able to communicate effectively in professional reporting and presentations.
