

Engineering Management MS Goals

1. Provide an understanding of core management areas vital for a technical manager, e.g., marketing, accounting, organizational behavior, business ethics/law, finance.
2. Provide knowledge of topics inherent and common to all engineering disciplines, e.g., systems engineering, total quality management, production management, management of product/process design.
3. Provide the requisite knowledge and skills to manage the engineering function at both lower and upper levels of management.
4. Provide experience in integrating technical and management aspects in “real life” engineering project or problem.
